RIDES TO HEALTH

RIDES TO HEALTH
INTRODUCTION

Missed or delayed appointments cost healthcare centers millions of dollars each year and result in long-term damage to the health of the patient. Rides to Health brings together patients, transportation networks, funding sources, and health care centers to provide rides to those in need. By linking driver apps to health center command modules to and patient phones all sides benefit from the increased coordination.

Rides to Health is designed to improve the availability and reliability of transportation for healthcare center patients by increasing access to services and subsidies, and providing real-time monitoring. The central system connects the dots of all the parties involved to integrate transportation and care.
FLEXIBLE ENTRY

Rides to Health is easy for all parties to participate in; each is provided their own user interface and tools.

- Patients can join by call center, smartphone app, or web.

- Funding agencies set rules for eligibility, subsidy and copay, service limitations, and requirements.

- Rides to Health connects patients to the available funding sources and transportation that best fits their needs.

EASY TO USE

Rides to Health takes care of the complex routing and trip organization behind the scenes.

- The healthcare center operations module groups patients and organizes appointments for ease of transportation.

- Rides to Health provides efficient routes to transportation providers.

- The system automatically compiles comprehensive reports relevant to each party.

- All user interfaces are designed for accessibility and ease of use.

PATIENTS

Rides to Health helps patients find more and cheaper transportation options to ensure that they arrive at their appointments on time. Through the app, call center, or website, patients can quickly book rides to their appointments and find subsidies.

FUNDING SOURCES

Rides to Health has extensive eligibility protocols that allow funding sources to set requirements for which trips they will pay for. Insurers and other funding sources benefit from ensuring adequate patient transportation to improve on-time performance and reduce long-term healthcare costs.

TRANSPORTATION SERVICES

Healthcare takes up an increasing share of public transportation resources even as budgets contract. By coordinating transportation services with patients and their appointments, Rides to Health produces routes that are more efficient and serves the transportation underserved. Vehicle tracking and ETA is provided to healthcare centers and patients to coordinate care.

HEALTHCARE CENTERS

Missed appointments are not only a problem for the patient, but also cost medical centers an estimated $150 billion a year. The Operations Module provides healthcare centers with an ETA for all patients, and allows them to reschedule accordingly and maximize the use of facility resources.
